- Information Systems Auditing, Controls and Assurance
- Scrum Master Certification
- Agile Project Management
- PMI Approved Project Management
- Advanced Diploma in Project Management
- Diploma in Data Analytics
- SUSE Intermediate and Technical Sales Specialist
- Salesforce Trailhead RANGER

Our Data Protection Approach.

- Take a data-first approach to cybersecurity by focusing on threats to your sensitive data on your endpoints.
- Remotely monitor your risk levels, and enforce security standards and policies at endpoints level.
- Take appropriate action at endpoints level to protect data, maintain its integrity and prove compliance from anywhere.
- Secure device lifecycle with zero-touch automated endpoint resilience, and always-on visibility and control.

Data First Approach.

Data Protection.

Privacy and Compliance.

Threat Detection and Responses.

Geo Locate

Locate a device as soon as it is lost or stolen, then take action to prevent a data breach.

End Sessions

Logout of all sessions, the device is rebooted, access to accounts are blocked.

Forced Reset

Lock devices remotely and request supervisor password.

Geo-Fencing

Lock a device if it leaves the specified area, and unlock when it re-enters the area.

Device Freeze

Remotely defined PIN code to unlock the hard drive, rendering the hardware useless to a thief.

End-of-life Wipe

Perform end-of-life wipes with compliance certificate.

IT Service Hygiene.

Monthly

Clear event logs

Rebuild performance

Disk defrag

Weekly

Empty recycle bin

Force reboot

Start system services

Daily

Run system cleanup

Delete Temp files

Fix system errors

Zero-Touch 3LM Operations Platform.

Endpoint Protection

Reduce your attack surface, stop threats, and respond quickly to security incidents.

Data Protection

We find, monitor, and protect sensitive data on premises and in the cloud.

Privacy and Compliance

We classify data based on sensitivity, exposure, and activity and enables data subject access requests.

Security Assessment

Vulnerability assessments and penetration testing for cyber security.

Remote Management

Securely manage your devices and network infrastructure.

Backup Management

Protect your data with multi-tenant cloud-first backup.

Threat Detection

Analyze the right telemetry from data, directory services, and edge devices.

Patch Management

Fully automate your patching, improve software compliance.

Tailored Sector Specific Services.

Legal Practitioners

Lawyers oversee sophisticated transactions and are required to protect the confidentiality of clients' data.

Tax Practitioners

Taxpayer's data can be used to create fraudulent tax returns.

Recruitment Agencies

Recruitment agencies have to be careful of how they manage employer and candidates data.

Travel Agencies

As a Travel Agent, you're both a data controller and a data processor.

Real Estate Agencies

Estate agents handle sensitive client data that is lucrative to cyber criminals.

Insurance Brokers

Insurers collect a wealth of data on individuals covering their health, property, vehicles, and even pets.

Funeral Parlors

They are often used as Burial Societies to provide a pathway to legal insurers.

Medical Practitioners

The observance of medical confidentiality goes without saying for every doctor.

Technology Partners.
